MAYNES COACHES

A GREENER WAY TO TRAVEL.

A GREENER WAY TO TRAVEL

In the current social and political environment everyone is under pressure to reduce their carbon footprint and do their bit for the environment. Coach hire is proven to be one of the most environmentally friendly ways to travel and is serving as an effective method of reducing carbon in order to help tackle the current climate emergency.

At Maynes Coaches we are actively working to reduce our carbon emissions throughout our entire fleet. One of the ways in which we manage to do this is by keeping as energy efficient as possible by subjecting our fleet to regular maintenance from our in-house engineers to ensure potential faults are eliminated. Keeping the vehicles well-maintained also increases fuel consumption efficiency.

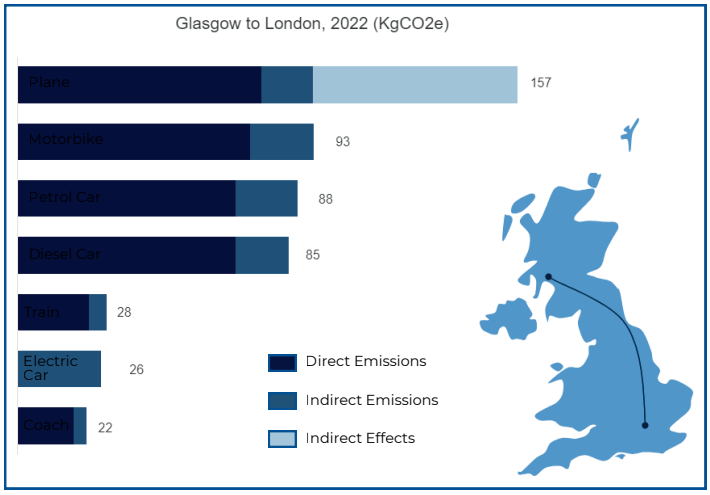

REDUCING YOUR CARBON FOOTPRINT

Our fleet has one of the lowest levels of carbon emissions within the UK industry, we understand the importance of reducing our carbon footprint and we can help you to do the same. With a standard car fitting four people at full capacity and one of our standard vehicles fitting around 49 people, that's 13 cars on the road in comparison to one coach. Given that most cars carry only two passengers this figure could be higher at 26 cars per one coach.

According to the Department of Transport and their 2022 Transport and Environment Statistics it was stated that a journey between London and Glasgow, a journey via the average petrol car emits over 4 times more CO2e per passenger than the equivalent journey by coach. The same journey by plane would emit over 6.8 times more CO2e per passenger than by coach.

In 2019 the Department for Transport released data stating that cars and taxis emitted 69.7 million tonnes of CO2 (18% of all domestic emissions) whereas coaches emitted just 3.4 million tonnes of CO2 -a mere 1% of all domestic emissions.

Coach travel is a simple solution to reducing your carbon footprint, and at Maynes Coaches we are proud to do our part by helping individuals and companies make a difference.

MAYNES ARE TRAVELLING TOWARDS A GREENER, SAFER, FUTURE

Our company operates a continual fleet regeneration programme and purchase the most environmentally friendly vehicles, therefore helping to reduce our Emissions and Carbon Footprint.
All our vehicles have Euro 6 emission engines, further reducing our overall carbon output. The coaches also have a comprehensive Vehicle Tracking and Telematics systems that allows us to monitor any unnecessary idling, therefore further helping to reduce our Carbon footprint and give a full carbon impact report for every journey. We also utilise this information during our in-house training sessions to optimise our driver's performance and ensure that we are upholding our responsibility of lowering our emissions and carbon footprint. The biggest step in our carbon journey? In 2025 we began builiding our bespoke, electric fleet.

ZERO EMISSION COACHING.

AN ELECTRIC FLEET

In 2025 we made an incredible investment into our carbon mission, by launching our new, bespoke built electric coach fleet complete with a full yard expansion (which doubled the size of our Buckie depot) and our electric charging infrastructure which is supported by a mass of solar panels.

Our fleet of electric coaches, currently comprises nearly a quarter of our main fleet in this first stage of the project, and has been bespoke built to ensure that we can significantly reduce the carbon imprint of our clients movements without compromising on the quality. We have successfully done this with our collaborations with Yutong and Mercedes where we have customised our coaches to deliver a premium product.

If successful, we will look to lean on ScotZEB funding to introduce a further five electric coaches in the near future, which will be further tailored to support the local community with vehicles designed for every day hires and others with an even higher calibre of luxury fittings.

Our current electric fleet has been embraced and praised by our clients as they have travelled through Speyside with Maynes in a zero-emissions coach, where they have remarked that it is lovely to experience the same knowledgable and experienced drivers who provide an outstanding service whilst also being able to move their organisations towards Net Zero. We look forward to continuing to develop this superior, 'Green' service.

Currently our larger electric coaches move hundreds of contract workers and school children within the local community every day. These coaches are fully utilised to their full potential, allowing us to keep future generations moving and the local economy turning in a sustainable way. These coaches are a higher standard of electric coach than what is offered at baseline and as such have successfully done a variety of private hires such as wedding transport, group trips and cruise ship excursions.

This means, you can travel with the knowledge that you can experience the same, industry leading, award winning coach travel experience in a zero emissions format.

This may be the newest way of coaching for Maynes, but we are proud of how successful this endevour has been. On the success of all our environmental efforts we were delighted to be awarded the Climate Action Award in October 2025 at the Highland and Island Thistle Awards.

Maynes are The Name To Trust In Travel and we have been leading the industry at the forefront of change and development since 1947.

We look forward to having you experience zero emissions coaching with Maynes.

Our electric fleet is fully wheelchair accessible. Full specs of our electric fleet can be found in our fleet list, available at www.maynes.co.uk

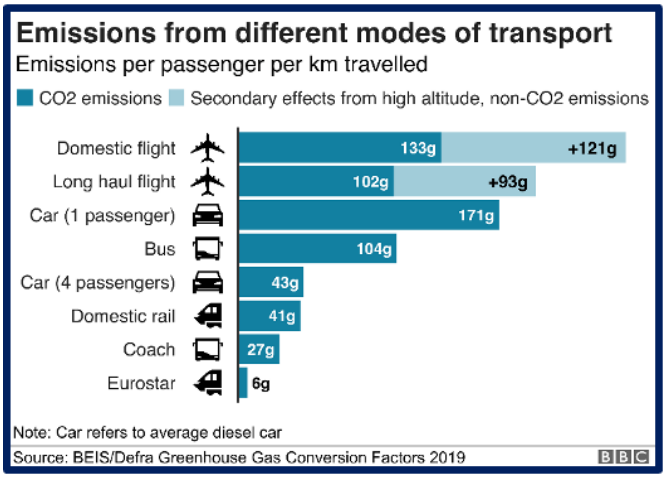

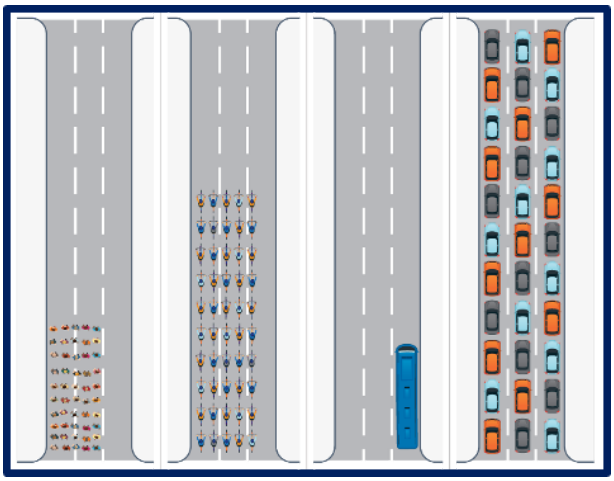

LOW EMISSIONS. HIGH STANDARDS.

ULTRA LOW EMISSION ZONES

The Ultra-Low Emission Zones (ULEZ) was introduced into Central London from April 2019 and is now being implemented across major cities within the UK.

ULEZ's aim is to encourage the use of eco-friendly transport options, such as coaches, within major towns and cities. All our coaches will be allowed in the ULEZ areas as we continue meet the required emission standards. Older fleets will have charges imposed to counter the carbon impact, be careful looking at coach hire quotations that may add a levy to your hire costs.

SAFETY

More than anything else, we value the safety of our customers, employees and the public.

For more than seventy years our company have had a strong commitment to safety and the environment and has invested heavily in training to ensure that the whole team fully understand the policies and procedures. Our entire fleet is fitted with Alcolock units. This system requires a driver to blow a clear sample of breath into an analyser machine in order to start the vehicle. We have a "zero tolerance" alcohol and drug policy.

Each vehicle undergoes rigorous and regular safety inspections, including a "first use" inspection before departure. The maintenance of our coach fleet is the Company's highest priority. We operate a large and well-equipped workshop within our Buckie Depot. Our four weekly safety inspections, routine maintenance and repair work is undertaken by our highly skilled engineering team ensuring that your safety is paramount.

Our company having a very modern fleet adds to our commitment to your safety with all our vehicles having the most up to date onboard safety systems.

We do not cut corners and prioritise your safety and satisfaction.

Although our company invest millions in our coach fleet, we are the first to recognise that the safety of our passengers is the most important part of our business, with that in mind from the moment your driver arrives at the start of your journey you will receive a full welcome and our driver will spend time explaining the vehicles safety and comfort features, this ensures that nothing is left to chance and your journey starts right first time – every time.

THE NAME TO TRUST IN TRAVEL.

TRAINING

Maynes Coaches management and staff are fully committed to a programme of training and quality accreditation. At present Maynes are also proud to be the only Scottish member of the Guild of British Coach Operators and have won several awards as Coach Operator of The Year to underline their commitment to excellence.

All our drivers are highly trained professionals and have experience in all types of private hire, conference and tour work. Many of our drivers have been with our company for up to and exceeding 20 years and we are proud of the many requests and compliments we receive for them.

Every one of our drivers goes through a tough selection procedure to ensure that we employ those with experience and professionalism, we choose drivers with the right personality that ensures that our customers receive the kind of care and attention to details they deserve.

All our driving team goes through a stringent in-house training plan, undergoing approximately 17 hours training per year from basic safety procedures to defensive and interactive driving tests as well as fuel economy monitoring and efficient driver training to save fuel are all in practice to reduce our carbon footprint.

Also, we check our driver's history by undertaking a full disclosure check as well as having drivers licence checked by the DVLA yearly ensuring they have the full licence entitlement for the type of vehicle they are likely to drive.

SUSTAINABLE PRACTICES

Maynes Coaches management and staff are fully committed to a ensuring that we operate in a sustainable and environmentally friendly manner in all aspects of the business.

Our uniforms are produced using recycled materials such as used plastic bottles. Our winter jackets are made with 27 recycled plastic bottles whilst our lighter, soft-shell jackets are made using 14 plastic bottles. Incorporating recycled materials into our uniforms has allowed us to keep our appearance smart without compromising our environmental commitment and is aiding Maynes in making a positive impact.

Our workshop and operations have environmental policies in place to ensure that waste is safety disposed of such as a tyre management company who are utilised to safely and efficiently dispose of old, worn and unusable tyres.

In the UK, businesses must provide a system of control and guidance with an opportunity to recycle our old items. As coach operator, we meet the requirements placed on us by using the local authorities refuse and recycling centre network, to recycle any waste electrical and electronic equipment. Maynes Coaches are proud to support our local authorities ambitions by actively using recycling facilities for electrical equipment, as well as having contracts in place for other recyclable material.

We have advanced technological systems in place to monitor and improve our fuel, AdBlue and energy usage and improve on our vehicle efficiency. Our Meridale fuel system gives a real time update on fuel outputs allowing us to track the usage of AdBlue and fuel within each vehicle. The industry leading TomTom Webfleet and MANTIS telematics systems also aid with this, providing full driving reports and eco stats including journey reports.

Our vehicles are 100% Euro 6 emissions complaint which means from our fleet to our in-house practices, you can be assured that when you travel with Maynes you are travelling on the road to NetZero.
Maynes provides low emissions luxury so you do not have to compromise your carbon goals for comfort.

OUR CARBON COMMITMENT

OUR ENVIRONMENT

Our Company cares for the precious environment that we live in, our coach fleet now all dates from no older than 2018. This ensures that our coaches meet the current European emission laws with our whole meeting both Euro 6 legislation. We also have a selection new, 2025 electric coaches within our fleet allowing for zero emissions, luxury travel.
Travelling by coach is the most environmentally friendly form of public transport. So you are assured that when you travel the Mayne way you are reducing your carbon footprint.
During 2008 we had our whole fleet fitted with GPS tracking devices to ensure that your journey is completed in the most fuel-efficient way. Our company also aims to eliminate excessive idling of our coaches when stationary saving both fuel and the environment, also reducing our own company's carbon footprint. In mid-2019 we recently installed the TomTom tracking and telematics system in order to upgrade our capabilities of tracking our environmental impact and efficiency.
Our company has already one of the lowest levels of carbon emissions within the UK coach industry, but we understand the importance of reducing ours further. Statistics taken from the department for transport shows that coach travel is one of the most environmentally friendly forms of transport.
At Maynes Coaches we recognise the need for sustainable development, the following points show key areas we promote within our company environmental policy;

ESTABLISH SOUND MANAGEMENT:

- Meeting or improving upon relevant legislative, regulatory and environmental codes of practice
- Developing objectives that target environmental improvements and monitor performance by regular review
- Considering any environmental issues in the decision-making process
- Developing a relationship with suppliers and contractors so that we all recognise our environmental responsibilities
- Educating staff so that they carry out their activities in an environmentally responsible manner

EFFECTIVE USE OF RESOURCES:

- Promoting waste minimisation by recycling or finding other uses for by-products whenever economically viable
- Promoting the efficient use of resources, energy and fuel throughout the organisations operations

CO-OPERATE WITH:

- The communities in which we operate
- The Government, regulatory bodies and other interested parties with the shared vision of being a good and trusted neighbour

If you would like any further information on any of the above topics you are more than welcome to contact our Buckie office, where an experienced staff member will be able to help you.
